Art Unit: 1644

DETAILED ACTION

Applicant's after-final amendment filed 2-3-03 (Paper No. 25) is acknowledged and has been entered.

Claims 48-51 are pending.

In view of said after-final amendment, all outstanding rejections have been withdrawn.

However a new ground of rejection has been applied to the instant claims.

In view of the new rejection presented below, the finality of that action is withdrawn.

Specification

The incorporation of essential material in the specification by reference to a foreign application or patent, or to a publication is improper. Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or a practitioner representing the applicant, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. See *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); and *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973).

Specifically the specification needs to be amended to incorporate the sequences of serrate and delta, which the specification discloses on page 10 can be obtainable from WO97/01571, WO96/27610 and W092/19734.

Applicant is reminded of the requirements for sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 C.F.R. 1.821 through 1.825

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 48-51 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The instant claims are drawn to a method of reducing T-cell activation by administering a notch ligand comprising a DSL domain to a patient in need thereof, wherein the notch ligand is Serrate or Delta. The instant specification discloses on page 10 that the delta or serrate family member proteins can be obtained using standard techniques of recombinant technology using appropriate sequences from publications such as WO97/01571, WO96/27610 and W092/19734. However, until said specific sequences are incorporated into the specification, one of skill would

not know how to make Serrate and Delta, and therefore it would require undue experimentation for one of skill in the art to practice the instantly claimed methods, without further guidance and direction from the specification.

Conclusion

No claim is allowed.
